

AMENDMENTS TO THE CLAIMS

1. **(Canceled)**
2. **(Original)** A method of camouflaging an exterior surface of a structure not intended for human occupancy, the structure located between a vantage point and a background, wherein a foreground extends away from the structure in a direction opposite the background, the method comprising the steps of:
 - a) providing the exterior surface of a structure intended for human occupancy with at least one reflector having a reflective surface; and
 - b) positioning said at least one reflector such that said reflective surface reflects light from a portion of the foreground to the vantage point.
3. **(Original)** A method according to claim 2, wherein at least a portion of said reflector is a semi-diffuse reflector.
4. **(Original)** A method according to claim 2, wherein said foreground has a generally uniform composition comprising characteristic wavelengths of visible light, the method further comprising the step of filtering from light incident said reflector at least one wavelength of visible light different from said characteristic wavelengths.
5. **(Original)** A method according to claim 4, wherein said at least one wavelength is in the orange-red portion of the visible light spectrum.

Claim 6-13: **(Canceled)**

14. **(Original)** A method of camouflaging an exterior surface of a structure located between a vantage point and a generally uniform background, wherein a foreground extends away from the structure in a direction opposite the background, comprising the steps of:
 - a) capturing at a first region light from at least one of the generally uniform background and the foreground;

- b) conducting said light to a second region located proximal to the non-specular exterior surface and spaced from said first region; and
 - c) emitting said light at said second region, at least a portion of said light being directed toward the vantage point without forming an image.
15. **(Original)** A method according to claim 14, wherein said foreground has a generally uniform composition comprising characteristic wavelengths of visible light, the method further comprising the step of filtering from light incident said reflector at least one wavelength of visible light different from said characteristic wavelengths.
16. **(Original)** A method according to claim 15, wherein said at least one wavelength is in the orange-red portion of the visible light spectrum
17. **(Currently amended)** A camouflaged structure located between a background and a vantage point, the background containing, simultaneously or at different times, a first color and a second color, the ~~method~~ camouflaged structure comprising:
- a) a member having a surface visible from the vantage point; and
 - b) a pattern of colors applied to said surface, said pattern comprising:
 - i) a first region containing a third color substantially the same as the first color;
 - ii) a second region containing a fourth color substantially the same as the second color; and
 - iii) a third region containing said third color and said fourth color combined to form a color gradient such that there is a gradual transition from said third color in said first region to said fourth color in said second region.
18. **(Original)** A camouflaged structure according to claim 17, wherein the camouflaged structure is a support tower.
19. **(Original)** A camouflaged structure according to claim 17, wherein the camouflaged structure is a chimney.

20. **(Original)** A camouflaged structure according to claim 17, wherein the camouflaged structure is a cooling tower.

Claims 21-76: **(Canceled)**
